

MARJON D. MOZO

Full-Stack Engineer

Davao, Philippines · English

SUMMARY

Full-stack engineer with 8 years of experience shipping production web platforms — from frontend-heavy SaaS editors to multi-tenant commerce systems. Strong in TypeScript, React, Next.js, and Vue, with recent platform work across PostgreSQL, payments, RBAC, and regulated-retail compliance. Detail-oriented and collaborative; I turn product and compliance requirements into reliable, usable software.

EXPERIENCE

GrowLikePetals

2025 — Present

Full-Stack / Platform Engineer · Freelance · Remote

Multi-tenant SaaS for independent alcohol, convenience, and vape retailers. One Next.js platform serving custom-domain storefronts, a super-admin operations portal, and a marketing site on a shared PostgreSQL schema.

- Designed a host-based multi-tenant storefront (Next.js, Auth.js, Stripe, Prisma/PostgreSQL) so one Render service serves many stores through custom domains, TLS, and Host-header tenancy.
- Built the platform admin for the merchant lifecycle: CRM (lead to opportunity to win), an 11-stage onboarding funnel with go-live gates (license, billing, catalog, storefront), Merchant 360 health, and SLA-backed support.
- Implemented regulated-retail controls: license-expiry auto-suspend, data-driven jurisdiction rules (age, hours of sale, dry zones, delivery legality), age verification with PII retention, and an immutable audit log (append-only writes plus Postgres triggers).
- Shipped money and catalog operations: dual-control payouts, refunds, and commission; cents-accurate GMV and take-rate reporting; queued, idempotent POS catalog sync so large PTECH catalogs do not time out over HTTP; and a provider-agnostic delivery layer (Uber Direct, in-house, pickup).
- Enforced staff RBAC with role templates and merchant/store/region scopes, step-up authentication for refunds, PII, and exports, and session/API-key revocation on offboarding.

Stack: TypeScript, Next.js (App Router), React, Tailwind, shadcn/ui, Prisma, PostgreSQL, Auth.js, Stripe, Zod, Cloudinary, Render, Uber Direct

Qatent (Questel)

2022 — 2024

Frontend Engineer · Paris, France · Remote

AI patent-drafting web app used by IP professionals to turn disclosures, claims, prior art, and figures into PCT-style drafts.

- Built the Vue 3 / Quasar frontend: project workspace, invention-disclosure intake, claims editor, description tree, figures, and terms/reference-numeral management.
- Streamed draft generation over WebSockets (section-by-section and full-draft modes), rendering chunks into a structured editor with progress, stop, and subscription-gated flows.
- Implemented a document pipeline for PDF, DOCX, and PPTX (pdf.js, Mammoth, JSZip): upload, preview, language detection, image extraction, and figure handling.
- Shipped a claims/description editor with undo/redo, find-replace, custom sections, claim-number and reference checks, term highlighting, and Zen mode.
- Localized the product in six languages (EN, FR, DE, ES, ZH, JA) and integrated Questel SSO, local auth, and subscription/credit gates on generation.

Stack: Vue 3, Quasar, Vuex, Vue Router, WebSockets, Axios, vue-i18n, pdf.js, Mammoth, JSZip

Archeo

Contract

Frontend Developer · Italy · Remote

Production React SPA for archaeological cataloging used by excavation teams and museums.

- Built a React 18 cataloging platform for finds, storage boxes, deposits, movements, bibliography, and archives against Italian ICCD 4.00 standards.
- Implemented an interactive WebGIS (OpenLayers 9 + Proj4) with multi-basemap switching, WMS/vector layers, shapefile upload, CRS handling, and map-to-record linking so users can search finds by excavation area.
- Delivered a schema-driven ICCD catalog editor, 2D/3D galleries (Three.js / GLB), and Excel bulk import with column mapping, GIS provenance matching, and downloadable success/error reports.
- Designed granular RBAC and work-group permissions, protected routes, and a role-aware in-app manual so teams can collaborate without overwriting verified data.

Stack: React 18, React Router 6, OpenLayers 9, Three.js, Axios, Sass, styled-components, SheetJS, Proj4, Jest

Ajustev

2019 — 2022

Frontend Developer · Colombia · Remote

Vehicle inspection management for field teams and administrators.

- Led frontend delivery of a vehicle-inspection platform: a React Native mobile app and a Vue.js / Laravel admin portal for inspection reports.
- Implemented image and video upload for reports and real-time chat with Socket.IO between mobile users and the admin team.
- Designed a clean web portal with data visualization so staff can review and manage inspection data across devices.

Stack: React Native, Vue.js, Laravel, Socket.IO, MySQL

Highnix

2018 — 2019

Software Developer · Singapore · Remote

Cloud and on-premises ERP / accounting system for Singapore SMEs (InvoiceNow-ready).

- Extended a PHP/MySQL ERP covering sales, purchasing, inventory, GL, fixed assets, and financial reporting for cloud and on-premises deployment.
- Implemented PEPPOL / InvoiceNow e-invoicing: mapped invoices to UBL 3.0, generated outbound XML, imported inbound sales orders and invoices, and reconciled status with Banqup and SESAMI.
- Built IRAS-aligned GST reporting (F5 boxes, reverse charge, IGDS, tourist refund) and IAF audit-file export for statutory filing.
- Exposed a REST API (Slim) for chart of accounts, journal posting, sales documents, stock movements, and tax/P&L data so external systems could post into the ERP.
- Added Singapore document flows (PayNow QR on tax invoices, digital signatures, proforma and progressive payments) and hardened production use with 2FA, role-based access, and CSV importers.

Stack: PHP, MySQL, Slim REST, JavaScript, jQuery, XML/UBL (PEPPOL), PDF/QR

EDUCATION

Bachelor’s Degree in Computer Science

2016 — 2019

Assumption College of Davao · Davao, Philippines

SKILLS

Code

TypeScript, JavaScript, PHP, HTML, CSS/Sass

Frontend

React, Next.js (App Router), Vue.js, Nuxt.js, Vuex, Quasar, Vuetify, React Native, Tailwind CSS, shadcn/ui

Backend

Node.js, Prisma, PostgreSQL, MySQL, Laravel, REST APIs, Zod, Auth.js

Platform

Stripe, WebSockets, RBAC, multi-tenant SaaS, Cloudinary, Render, AWS, DigitalOcean, Vercel, Git, Jest
